

## 1- Using document object method

- a- Find all images in page by two ways ([document default collection](#) and [document methods](#))
- b- Find all options for City drop down list
- c- Find all rows for second table in page
- d- Find all elements that contain class name [fontBlue](#)

## 2- Do the following actions on the following HTML elements

- a- Get first anchor inside the second table then change its' [href](#) property to [training.com](#) and it's text to "Training"
- b- Find last image and change its borders to : [solid pink 2px](#)
- c- create Javascript function to Find all checkboxes ([checked](#)) in userData form and alert their values
- d- Find element with id value "[example](#)" then change it's background color to pink

## 3-SlideShow

**4- having dropdown Menu containing IDs for array of Objects for Students where selecting id**

**Display student data in div**

**5- write js code to print data from array as even indexes will be printed with style different than odd ones**
